

Setup Guide

Database

1. Download and install PostgreSQL in version 9.4 or newer (<http://www.postgresql.org/download/>)
2. Create a user “postgres” with password “postgres”.
3. Create a databases with the names “recipes”.

Code samples and exercises

1. Import the “HibernateTips” project as an existing Maven project into your IDE.
2. Run “maven clean verify” to build and test all example projects.
3. Refresh your IDE, if it shows any errors.
